**Battery Requirement:*

One 12V, 115 AMP (438278)

**Not Included*

The DebrisMaster™ 28" and 36" battery sweepers are perfect for vacuuming large carpeted or hard surface areas, removing debris and fine dust in one pass.

Easy to operate, their compact size and maneuverability make them ideal for cleaning in confined and congested areas as well as large areas.

The main housing cover is easily removed for brush adjustment, machine maintenance and access to the battery.

Equipped with a electronic filter shaker that allows operator to clean the filter without removing it.

The main brush sweeps up dirt and debris in a straight line, while the side brush cleans up to edges and under baseboards. Both brushes are adjustable for maximum sweeping.

Two hoppers collect debris and lift off for easy emptying

The low voltage cutoff system monitors batteries so they never run down below 20%, protecting the sweeper and prolonging the battery life.

Includes automatic charger with built-in plug on control panel, just plug in charger and brush upgrade for carpeted and hard surface floors.
